

Passport Health Vaccine Registry

Your Records Management Solution

It's no secret that the process of maintaining health records is fraught with administrative headaches. Obtaining and making sense of the medical records of thousands of employees nationwide, all potentially prepared in a different manner by diverse providers, is a nightmare. Sorting through paper copies of immunization histories can overwhelm even the most sophisticated filing system, and staying on top of records sent in via multiple methods requires an extensive time commitment. Luckily, Passport Health's Vaccine Registry provides a streamlined solution!

Key Features of the Vaccine Registry:

- A unique url and co-branded portal are set up for each Corporate Client
- Employees may log in from anywhere in the world to immediately access health records via Passport Health's HIPAA compliant portal
- Records from other providers may be uploaded as well, allowing complete records to be stored in one place and in a standard format
- Employees may automatically email and fax records to the appropriate Human Resources contact, Vendor Credentialing Organizations, and/or Primary Care Providers
- Employees receive automatic notice when new services are added to their records
- Detailed reporting is available to the proper company contact to allow for more accurate forecasting and understanding of vaccination coverage across your organization

Please email clientservices@passporthealthusa.com for a detailed walk-through of how this tool can benefit your organization!
